SUMMARY

Motivated Computer Science undergraduate with expertise in full-stack development, AI integration, and cloud technologies. Proven ability to design and deploy user-focused applications with seamless payment systems and real-time features. Passionate about solving real-world problems through innovative software solutions.

PROJECTS

Privacy-Preserving Healthcare AI using Federated Learning

January 2025 – Present

Decentralized ML System for Diabetes Prediction Python, Flower (flwr), TensorFlow/Keras, gRPC, UCI Pima Dataset, FedAvg, MLP, React

- Designed a federated learning system where multiple hospital-simulating clients collaboratively train a global MLP model on the UCI Pima Indians Diabetes dataset using FedAvg — achieving 80.2% accuracy without any raw patient data leaving local nodes, vs. 82.5% for centralized baselines.
- Led frontend integration, model training pipeline, and server-side aggregation; implemented gRPC-based communication between SuperLink and SuperNodes with TLS encryption to ensure HIPAA/GDPR-compliant weight transmission.

Screened Desire

2025

AI-Powered Movie Recommendation & Trailer Platform

React, Vite, Tailwind CSS, Django REST Framework, Appwrite, TMDB API, Groq LLM, JWT, SQLite

- Built a full-stack movie recommendation platform that analyses user search patterns to surface personalised film and series suggestions using TMDB API.
- Integrated trailer streaming directly into the platform; implemented JWT-based authentication with Appwrite, SQLite-backed Django REST API, and secure CORS configuration; includes a Groq-powered movie chatbot.

Learnstitution

June 2024 – August 2024

Interactive Constitutional Learning Platform

React.js, Express.js, Node.js, MongoDB, OpenAI API

- Designed an educational website for learning constitutional laws with an AI-powered multilingual Q&A; chatbot via OpenAI API.
- Implemented secure authentication, personalized progress tracking, and interactive quizzes to enhance user engagement.

Campus Goods & Food Delivery App

January 2025 – May 2025

Third-Party Campus Delivery Platform

React Native, Express.js, MongoDB, Google Maps API, Razorpay, Socket.io

- Built a mobile app for campus peer-to-peer delivery with real-time parcel tracking via Google Maps API and live chat via Socket.io.
- Integrated Razorpay payment gateway and role-based access control for customers and delivery personnel.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, Java, C/C++, MATLAB

Frontend: React.js, React Native, Vite, Tailwind CSS, HTML, CSS

Backend: Node.js, Express.js, Django, Django REST Framework, Flask

Databases & Cloud: MongoDB, PostgreSQL, SQLite, Appwrite, AWS, Git

APIs & Tools: RESTful APIs, OpenAI API, Groq LLM, TMDB API, Google Maps API, Razorpay, Socket.io, JWT, gRPC, Flower (flwr), TensorFlow/Keras

Core Concepts: Data Structures, Algorithms, Full-Stack Development, Federated Learning, AI Integration, Privacy-Preserving ML

EDUCATION

VIT Bhopal University

Bhopal, India

Bachelor of Technology (B.Tech) in Computer Science and Engineering

August 2023 – Present

CGPA: 8.31

Navkis Educational Centre

Bangalore, India

CBSE XIIth – Science Stream

2019 – 2023

Xth: 94% | XIIth: 85%
